About the product

The purpose of Healthy Belly is to improve the shopping experience for Pregnant Women and the families/friends of said pregnant women. Instead of users reading through multiple nutritional/ingredient label they can simply scan the barcode of the item and get the results instantly. It will facilitate aa a shopping aid for Pregnant Women and related people. This application will search through the ingredients of the product scanned and will inform the user of whether the item scanned is safe or not. This aims to make lives easier for pregnant women and their families.

So how do we make this process simpler and efficient for everyday humans who do not have the knowledge of such ingredients or the time to go through multiple items?

This led to the idea of Healthy Belly's formation.

Healthy Belly is a user friendly application with very basic and simple interface to minimize any technological complications for a common man.
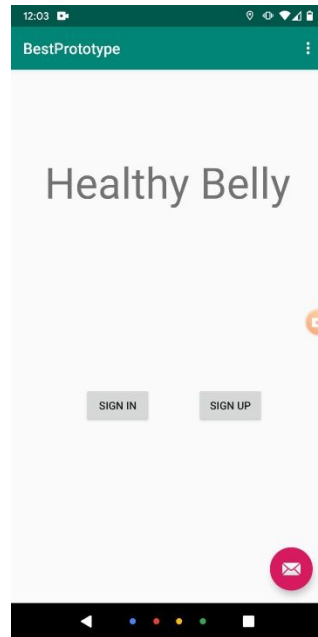

Getting started

Basic requirements to access the application and it's features

- Android Version 5.0 (Lollypop) or higher

How to use the app?

Healthy Belly has a basic and simple layout for easier access for users.

1. The main screen allows user to either login or sign up as a user to proceed with the app.

2. To sign up as a new user, the user needs to fill the expected basic information including Full name, Email address, dietary preferences, allergies and protected password.
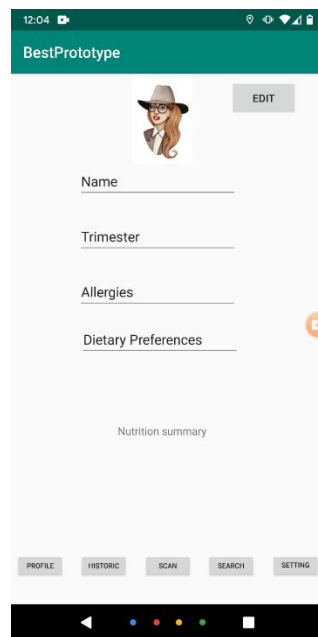

3. Once a user successfully signs up, they have access to the scan/search option which will enable them to obtain the required dietary suggestions depending on the trimester and other specified information.

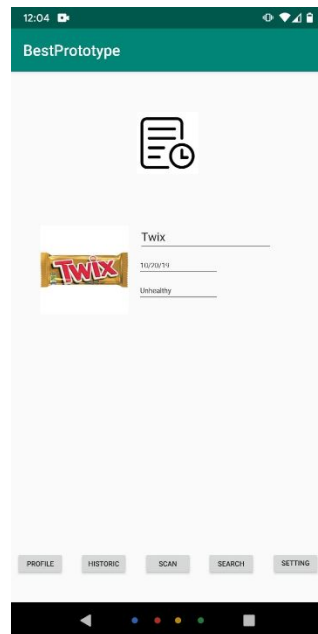

4. Once the user has access to the application after signing up, there are four major features that will better assist: PROFILE - HISTORY - SCAN - SEARCH - SETTINGS
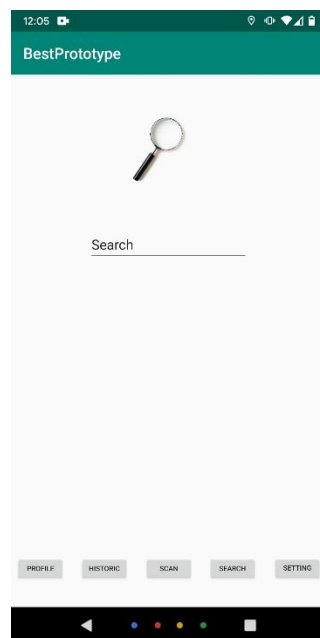

PROFILE: Allows the user to make changes to profile at any time after the initial sign-up process.

HISTORY: Allows the user to review items scanned/searched in past.

SEARCH: Allows the user to search the item instead of scanning barcode.

SETTINGS: Allows user to equipt with added-on functionalities.
